

Aggregation Switch Uplink Ports

Overview

A Link Aggregation Group (LAG) optimizes the usage of switch ports by linking a group of ports to form a single, logical, higher-bandwidth link. Aggregating ports multiply the bandwidth and increase port flexibility for Sophos Switch. 3ad) that dynamically manages link aggregation, provides automatic failover, and helps prevent misconfigurations by ensuring both ends of the link agree on the aggregation settings. The following list details the basic. IEEE 802. The LAG balances.
