

BIDI optical module types

Overview

In this guide, we focus on how BiDi SFP modules work, the differences between 155M, 1G, and 10G BiDi SFP types, and the real-world trade-offs that determine when BiDi optics are the right choice—and when a traditional dual-fiber SFP design may be more appropriate. □ What Is a. BiDi transceiver, a compact optical transceiver with WDM (wavelength division multiplexing) technology and SFP multi-source protocol (MSA) compliance, allows fast data transmission using a single fiber optic for both sending and receiving signals, saving resources and cutting infrastructure costs. It achieves simultaneous bi-directional communication by using different. BiDi optical modules can do this by utilizing full-duplex communication over a single fiber strand via two wavelengths. In other words, this means that it allows for simultaneous two-way data flow.
