

Connectors are available at both ends of the optical fiber

Overview

An optical fiber connector is a device used to link optical fibers, facilitating the efficient transmission of light signals. An optical fiber connector enables quicker connection and disconnection than splicing. They come in various types like SC, LC, ST, and MTP, each designed for specific applications. In all, about 100 different types of fiber optic connectors have been introduced to the market. Th. Application Optical fiber connectors are used to join optical fibers where a connect/disconnect capability is required. Due to the and tuning procedures that may be incorporated into optical connector manufacturi. Many types of optical connector have been developed at different times, and for different purposes. Many of them are summarized in the tables below. Modern connectors typically use a physical contact poli. Features of good connector design:

- Low insertion loss - should not exceed 0.75
- Typical insertion repeatability, the difference in insertion loss between one plugging and another, is 0.2 dB.
