

Cross-Data Center Networking Solutions

Overview

Cross connects offer lower latency, stronger security, and more predictable performance than internet-based connections. Secure, dedicated, point-to-point networking to connect your workloads and applications across the data center, campus or metro. One of the biggest advantages of colocating your workloads in a DataBank data center is the ability to leverage direct connectivity from your infrastructure to a rich. Nokia helps the world's most innovative companies build, scale, and operate data center networks that meet cloud connectivity requirements and the dramatic increase in demand driven by AI workloads. Common types include fiber cross connect. What is a Cross Connect?

A cross connect refers to the physical or virtual link between two different entities within a data center, typically between a customer's equipment and the infrastructure of a service provider, cloud network, or telecom carrier.
