

Dimensions of Outdoor Server Racks for Local Area Networks

Overview

Common server rack sizes are 19-inch width, heights like 42U or 48U, and depths from ~24" to 48". The right rack dimensions ensure optimal equipment compatibility, airflow efficiency, cable management, and long-term scalability. Most IT environments default to 42U, 19-inch width, and 1000–1200 mm depth unless space constraints or special equipment dictate. Server Room Environments supplies a comprehensive range of server racks and cabinets, from 4U to 47U, suitable for standard office and IT applications as well as bespoke cabinets designed for roadside and extreme environments. A server rack is more than just a physical frame—it determines how well your rack servers, network switches, PDUs, and storage arrays can be organized. Downloadable PDFs are available for the following: [Server Racks Specifications](#): Detailed performance metrics, weight capacities, and cooling options for open frame, enclosed, and seismic racks. [Wall Mount Cabinets Specifications](#): Comprehensive details on dimensions, load capacity, and access.
