

Fiber Optic Router Speed Limit Settings

Overview

In the navigation tree on the left, choose Advanced > QoS Configuration > Speed Limit Settings. The TP-Link Speed Limit (Bandwidth Control) feature lets you throttle internet speed on a per-device basis — useful for preventing one device from hogging bandwidth or keeping connections fair for everyone in the household. You can set independent download and upload limits for each connected. Internet speed refers to how quickly data moves between your device and the internet, measured in megabits per second (Mbps). Faster speeds allow for smoother downloads, video streaming, and browsing. Now, type your admin credentials like your username and password. It is. Does the internal network adapter get in 100MBPS mode while connected to the router while 1GBPS while connected to switch?

Have you tried to log into your router and see if there is settings for port speed that can be changed?

Have you tried to communicate internal between computers at home?

Are. Some customers may report the speed is limited to 100 Mbps when connected to the TP-Link router, while the speed is much faster and can reach up to 500+ or 900+ Mbps when connecting to the ISP modem directly. If this is what you are experiencing, follow this article to get it resolved.
