

Fiji OTN Router 200G

Overview

The 200G OTN transponder provides a high transport capacity of 200G over a single wavelength, it aggregates 2x 100G services into a single 200G uplink. It's up to eight single wavelength 200G channels, with 8x 200G CFP2 coherent optics uplinks on the line side, and 16x 100G QSFP28 on the client side. Its large transmission capacity. Sharetop's OTN Transponder Platform developed is highly integrated with advanced technology. A single port can stably transmit 200G-rate services. It is mainly used in the core layer and convergence layer network of national optical network backbone lines, operator MAN, data center interconnection. To achieve massive information interaction and meet the demand for ultra-high speed and ultra-bandwidth data center interconnection (DCI), QSFPTEK has launched the 200G transponder - a customized OTN transmission platform for DCI applications. The solution adopts QT8600serie equipment, with 2 100G. Muxponder technology utilizes ITU OTN (Optical Transport Network) protocol and mapping to reduce the number of wavelengths needed to transport the data, making it the preferred choice for maximizing fiber capacity and simple future network growth. Muxponder technology aggregates multiple services. M2H200TN is a high density 1U height 200G OTN muxponder, it adopts the advanced technology and ASIC chip, and it is fully compliant with domestic and international related standards (such as ITU-T G. The industry's most advanced coherent technology and FEC forward error correction coding technology enable high-capacity, long-distance.
