

How to erect pillars for a tunnel bridge

Overview

There are three major methods of erecting bridge pillars, the Battered Piles method, the Cofferdams method, and the Caisson method. Based on the construction over waters, different types of techniques like type of sand underwater, type of water, weather conditions of the area and. I would like to know how to create new standard sections for the pillars of a bridge and standard section of a tunnel. 07-18-2022 10:57 AM Hi @fernando. Here's a simplified step-by-step explanation of how they are made:

- 1. These methods are crucial because they determine the safety, durability, and functionality of the bridge. A well-designed and constructed bridge can last for decades, providing a reliable transportation route for people. To initiate the construction of a coffer dam, engineers begin by erecting guide piles using specialized equipment such as a pile driving hammer machine.
