

How to ground the machine and the distribution box

Overview

Attach a ground wire from one of the threaded studs (A) at the bottom of the housing, to the mounting plate (B). The ground resistance between all system parts shall be $<$. Power from factory ground must be installed by a qualified electrician. Each DISTRIBUTION BOX and controller must be grounded. 26 mm² (10 AWG) ground wire must be used, and in all other markets a 6 mm² must be used. During fault. Safety of Personnel: By safely channeling fault currents into the ground, proper grounding helps to reduce the risk of electric shock to personnel. Not only does it protect personnel by ensuring safe voltage levels on exposed metal surfaces, but it also safeguards sensitive electronic equipment from electrical disturbances like transients and. This document describes recommended grounding practices as applicable to Bently Nevada* vibration monitoring systems. It also defines common terms, identifies potential sources of noise, describes basics of a plant grounding system, explains ground loops, and presents a troubleshooting guide to.
