

How to mark parts in a 3D model of a light module

Overview

With a project open, right-click in the model space and pick Point Layout > Add Selection Points. In the Manually Add Points dialog, choose the appropriate tab for the objects you want to mark. Enter a description and point number, and. This article explains how to add markings to your 3D assembly in MasterShip. You'll start with a detailed 3D assembly that already includes part data. This process is crucial for minimizing errors in the. How to mark in a 3D assembly/construction the places where the PCB components should be placed on a 2D layout file in Fusion 360?

For example, to place Led which needs to be positioned exactly in front of an optical transmitter on the PCB board. Open the enclosure file in Fusion 360. Figure 2 shows the first sheet of a multisheet drawing that documents the. Object setup and configuration - This is when you will secure your chosen material into the 3D laser marking From there, you will adjust the workstation's settings, so the speed, power, and focus are tailored to your specifications. You may even want to run a quick test to ensure that the markings. In this video, learn all the steps to create a custom component in EasyEDA, the online PCB design software! □ Whether you're a beginner or an advanced user, this tutorial walks you through each stage of creating a complete electronic component, from defining its symbol to adding a 3D. The component specifications are described here: ● To reduce file size, the 3D components should consist of 3D solids. Avoid using meshes or NURBS objects. Instead, use extrudes, sweeps, additions.
