

Openfiler Fibre Channel

Overview

Openfiler supports a plethora of hardware RAID and Fibre Channel controllers and disk technologies such as SAS, SATA and SCSI. Fast, Gigabit and 10 Gigabit Ethernet controllers from Intel and Broadcom can also be integrated to provide high bandwidth access to data over a TCP/IP. Openfiler converts an industry standard x86_64 architecture system into a full-fledged NAS/SAN appliance or IP storage gateway and provides storage administrators with a powerful tool to cope with burgeoning storage needs. Openfiler, being open-source, allows you to set up your own SAN environment without breaking the bank. The configuration. Openfiler is driven by rPath Linux. It is a browser-based free network storage management utility that provides file-based network connection storage (NAS) in a single framework) and block-based storage area network (SAN). Since the. Due to high demand of IO, we have to upgrade the hardware of iSCSI server. 99 and map a volume to FC card. It supports CIFS, NFS, HTTP/DAV, FTP, and iSCSI. Openfiler helps you to build the very powerful & reliable networked storage solution which is easily managed by the Openfiler browser based management UI.
