

Operating Principle of a Three-Level Distribution Box

Overview

Summary of Three-Tier Power Distribution System: Primary: The main distribution panel, supplies power from the transformer. Hierarchical and Branch Circuit Distribution (1) Power distribution from the primary main distribution board (distribution cabinet) to secondary distribution boards can be branched; that is, one main distribution board may supply. Equipment inside usually includes isolating switches, circuit breakers, and residual current devices (RCDs). Supplies power to specific buildings or floors. Equipped with larger three-phase circuit. Let's make a hypothesis: a newly built residential area introduces a 10kV incoming line and builds a distribution room. Now the distribution board factory will share with you how the three levels of distribution boards control the circuit. Keeping circuits safe from short circuits and too much power.
