

# PoE switch has no image

## Overview

Ensure your PoE switch or injector is properly powering the IP camera, as insufficient power is the most common reason it fails to appear on the network. Verify cable integrity, correct VLAN settings, and use a network scanner to confirm the camera's IP address and eliminate configuration issues. Check Camera Status: In the IPC channel configuration, identify cameras with IP addresses not in the 138 segment (e. 101) that show as "Unconnected. " And please turn off the "auto add" button. Disconnect NVR from the Internet: Remove the NVR's network cable to ensure it is offline. However, PoE setups can encounter various issues. Here are some common PoE issues and how to troubleshoot them: 1. Insufficient Power Delivery. Power over Ethernet (PoE) simplifies device deployment by delivering both data and power over a single Ethernet cable.

## Article Content

POE Camera Has No Images To Be Displayed But It Is

Then change the IP address of the NVR to be consistent with the network segment of the camera that does not show images. For example, the IP address of the

HPE Aruba Networking CX switches
