

# Price of overhead power lines for distribution boxes

## Overview

The average cost to run power underground is \$10 to \$25 per foot, or \$5,000 to \$12,500 for 500' of new electrical lines. Project buyers typically see a broad range when estimating a transmission line build, driven by right-of-way access, line length, tower spacing, conductor type, and permitting requirements. This article focuses on practical pricing in USD, outlining a clear cost framework for typical utility-scale overhead lines over a 100km straight line distance. All scenarios assume 2 single phase circuits on L7 steel lattice towers using Overhead Line conductor design, professional fees or client overhead. A further allowance of 20% would cables are only required for certain sections. It has been assumed. When utilities, municipalities, or developers are deciding between overhead and underground powerline installations, cost is always a central concern—but upfront price tells only part of the story. Get free estimates from. The electric power transmission, control, and distribution industry is a dynamic field, where precise cost estimation forms the backbone of successful project execution.
