

# Several types of monitoring displays are available for the small busbar

## Overview

Focused optics are available for measuring narrow busbars, or for measuring thicker busbars edge-on. Electrical busbars are typically made of copper or aluminum due to their excellent electrical conductivity, durability, and low electrical resistance. The choice of. Temperature rise testing is one of the recommendations of IEC 61439; our system for monitoring switchgear and busbars is easily integrated with new installations or retrofitted to existing infrastructure. Switchgear and busbars can be constantly and comprehensively monitored for temperature rises. Comprehensive monitoring features designed for maximum electrical safety and operational efficiency Continuous monitoring of current flow through busbar systems with high-precision wireless sensors Infrared and contact temperature monitoring to detect hotspots and prevent electrical failures. The plug and play busbar monitoring solution that compliments the flexibility of busway solutions: Packet Power's wireless monitoring is the only true plug and play monitoring system for busbars, avoiding the constraints and complexity of wired monitoring systems. At the same time, it can monitor.
