

The function of cable management racks for cable adjustment

Overview

A cable management rack is designed to route, protect, and organize copper and fiber cables inside network cabinets. Beyond keeping cables tidy, a well-structured cable manager reduces cable stress, improves heat dissipation, and ensures bend-radius compliance for data. To simplify, below we divide cable management products into the three basic functions they serve: Rack cable managers attach to an enclosure's rack rails to organize and direct cables running in and out. The bend radius of these cables should be within the ranges specified for the type of cable being used. Siemon offers a wide range of racks, cable management, and accessories designed. Defining cable pathways is more than aesthetics - a properly configured cabling environment helps ensure maximum signal quality and transmission speed by eliminating kinks, twists and sharp bends.
