

Transceiver pigtail

Overview

They are the bridge between fiber optic cables in the field and the equipment or patch panels that manage them. By combining factory-installed connectors with spliced bare fiber, pigtails ensure that network installers can create fast, reliable, and cost-effective terminations. Get the wrong connector type, the wrong polish, or skip proper fusion splicing technique—and you're looking at elevated signal loss, increased back reflection, and a. The 100 Gb QSFP28 PSM transceiver supports up to 2 km over single-mode parallel fiber using an 8 parallel fiber MPO interface. 100 Gb PSM4 QSFP28. A pigtail fiber indicates a short length of optical fiber cable that has a pigtail connector (for example, SC, FC, ST, LC, etc.) fitted on one end and the other end undressed (for connection through fusion or splicing) to the main fiber optic cable.
