

# What are the hazards of fiber optic cold splices

## Overview

Without proper splicing and closure protection, networks face: signal degradation and increased attenuation—reducing transmission quality and speed. There are inherent hazards that we cannot overlook when discussing fusion splicing. The fusion arc burns over 5,000°C and can cause serious burns in an instant. Even. The safety issues for fiber optics are not what everyone thinks of. Getting your eyes burned by looking at a laser light fiber. Most fiber optic systems have power levels too low not to do any eye damage, but to be safe, “it is stupid to look into a fiber when you don't know what is being. In PON and FTTx networks (e. To protect these vulnerable splice points, splice closures are indispensable. Before beginning any installation, safety rules should be posted on the. The performance of a fiber optic splice is determined by a number of factors, including the quality of the fiber, the cleanliness of the splice, and the techniques used to make the splice.
