

What is a dedicated router for fiber optic cables

Overview

As the name describes, a fiber optic router is a dedicated internet component designed for fiber optic internet that utilizes fiber optic cables to transmit the internet instead of CAT-5 and CAT-6 cables. Unlike CAT-6 cable routers, fiber optic cables transmit light signals due to. A fiber router is designed to work specifically with fiber optic internet connections, providing faster and more reliable speeds compared to a normal router that typically works with traditional broadband connections. Fiber optics are a transmission medium that uses pulses of light to send information over long distances at much higher speeds than conventional copper. The answer is actually no—fiber optic equipment differs significantly from cable setups. Instead of a traditional modem, fiber internet requires an Optical Network Terminal (ONT) that converts light signals into electrical signals your devices can understand.
