

# What materials are used in the SDB distribution box

## Overview

You can find distribution boxes made from various distribution box materials such as steel, aluminum, PVC, polycarbonate, high-density polyethylene, and thermoset plastics like SMC. Each distribution box material has its own special strengths. The professional quality housing is made from robust poly-styrene. For example, you may need flame retardant features. Metal Enclosures: In industrial or heavy-duty applications, stainless steel or galvanized steel is frequently used due to. The box material of Distribution box is generally made of steel plate, insulation board or epoxy glass cloth board. Reasons for material selection: The strength and corrosion resistance of steel plate make it a common material for the box of the distribution box, and its good conductivity also. Inside a distribution box are components like circuit breakers, earth leakage units, doorbells, and timers. The building's electrical power enters through the main feeding cable, which connects to the distribution board.
