

# Why would a switch refuse access

## Overview

Check if the switch's management VLAN/IP is reachable and not blocked by any ACL or upstream firewall. If it is enabled, check for transport input ssh under line vty mode. Here is the sample configuration: if you think configuration fine. show ip access-list 09-21-2024 03:13 AM 09-21-2024 04:39 AM Hello. One switch in particular isn't allowing ssh connections, it doesn't show anything on switch logs, SSH is enabled with no access profiles, the private key is present and the switch configuration is the same as other switches. Could someone advise of a troubleshooting step that doesn't involve a network switch malfunctioning, it can bring your entire network to a halt. That's why it's crucial to quickly identify and resolve switch issues to maintain network stability and performance. In this guide, we'll. The SSH 'Connection Refused' error occurs when the remote server rejects connections, usually because the SSH service isn't running (sudo systemctl start sshd), port 22 is blocked (sudo ufw allow 22), or network/firewall rules prevent access. Verify the service status, check local and cloud. When managing your servers, you will often need to use the Secure Shell (SSH) protocol, but sometimes you might see a "Connection Refused" message.

## Article Content

what would cause SSH connection refused but not refuse an

The complaint in the logfile will give the ethernet MAC address of the other server, which the switch can resolve to the physical port number, and through the cable to the other
